

Need For A New Cloud Framework

- **Next generation mobile applications are not just point applications. They are beginning to rely a lot on cloud content processing and control of content**
- **Need for robust support of content delivery and control over networks with various levels of performance**
- **Need to access content from private and public cloud seamlessly**
- **Need to perform parallel and distributed processing to achieve global control over a cloud**
- **Content needs to be intelligently delivered with high tolerance to failures minimizing end user performance degradation**

Bigonet Mobile Cloud

- **Highly available, scalable cloud framework**
- **End to end parallel and distributed control**
- **Advanced event processing system with reliable multipoint to multipoint messaging**
- **Acceleration caching**
- **Enabling sophisticated cloud applications**
